To Our Customers :

It is our desire to execute orders with the best of attention and to serve our patrons promptly. At certain "rush" seasons delays are sometimes unavoidable, and this is especially true in the seed and implement department during the Spring months, particularly on Wednesdays and Saturdays—"market days." At such times we cannot undertake to fill general orders for seeds right over the counter, and our customers will save themselves many annoying delays if they will go through our price list and, as far as possible, make up their general order of seeds and put it into our hands at least a week before delivery is wanted. In this way the order will receive more careful attention, be packed, and marked for delivery to the customer at such time as he may specify. ORDER EARLY.

DELIVERIES. We make no charge for delivery of general orders to customers within the City and to the Freight Stations for shipment to outside points, the purchaser paying the freight charges.

PARCEL POST. No extra charge for postage on small Vegetable Seeds at prices in this List by the ounce, quarter-pound and pound; but for Peas, Beans, Corn, Onion Sets and other goods add 8 cents for the first pound and 1 cent for each additional pound, or 10 cents for the first quart and 2 cents for each additional quart, to cover cost of mailing.

QUANTITY BASIS. Half-pound (of one variety) sold at pound rate, $\frac{1}{2}$ pecks at peck rate, $\frac{1}{2}$ bushels at bushel rate.

NON-WARRANTY. While we use great care to procure seeds of high germination and purity, and those true to name, there are so many conditions of planting and growing beyond our control, we give no warranty, express or implied, as to description, quality, or productiveness of the seeds we offer and cannot be responsible in any way for results. If the purchaser is not willing to accept them under these conditions they should be returned immediately in the original package.

Price List for 1928

FOR THE HOME GARDEN

which by reason of limited space is restricted in the number of varieties to be selected we especially recommend the following:

BEANS—Giant Snap-Short, Prolific Black Wax, Fordhook Bush Lima, Dreer's Improved Pole Lima.

PEAS—Wonderful, Peter Pan, Gradus.

CORN—Genesee Early Sugar, Evergreen, Golden Bantam.

BEET—Lightning Blood, Genesee Early Wonder, Detroit Dark Red.

CABBAGE—Jersey Wakefield, Danish Ballhead.

CARROT—Genesee Coreless, Genesee Half-long.

CELERY—Improved White Plume, Winter Queen.

CUCUMBER—Early Fortune, Davis Perfect.

EGG PLANT—Genesee Early Beauty.

KALE—Dwarf Siberian

LETTUCE—Genesee Early Curled, Big Boston, Genesee Wonderful.

MUSKMELON—Fordhook, Hearts of Gold.

WATERMELON—Genesee Sweet, Tom Watson.

ONION—Genesee White Globe, Yellow Prizetaker.

PARSNIP—Genesee Large Sugar.

PEPPER—Genesee Mammoth.

PUMPKIN—Improved Cushaw, Sweet Potato.

RADISH—Genesee Early Forcing, Scarlet Turnip (white tipped), Genesee White Box, Icele, Celestial.

SQUASH—Silver Custard, Red Hubbard.

TOMATO—Bonny Best, Scarlet Beauty, Stone.

TURNIP—Impr. P. T. White Globe, Golden Ball.

PLEASE READ paragraphs "TO OUR CUSTOMERS" on opposite page regarding Deliveries, Parcel Post Rates, etc.

Hairy or Winter Vetch	.35	2.10	7.50-60 "
Dwarf Essex Rape20	1.10	3.75-50 "

The Planting of Forage Crops has become much more general in recent years. Farmers have found by frequent trials that they can produce a very heavy tonnage of rich forage by planting these special crops. Frequently two crops are planted together. For instance:

In March or Early April

Plant Canada Field Peas with Oats.

In May or June

Plant Soy Beans or Cow Peas with Oats or Barley or with Sugar Cane or Kafir.

In September or October.

Plant Winter Vetch with Rye.

All these combinations produce wonderful crops of rich forage or silage, with a comparatively small outlay of money and labor, and do not exhaust the land; on the contrary, rather add to its fertility because of their power of absorbing nitrogen from the air. This is particularly true of Soy Beans and Cow Peas. We recommend especially the **Early Wilson Soy Bean** for planting in this section on account of its quick growth and early maturity. **Sudan Grass** is another crop that gives a large yield of forage and may be planted instead of Millet to great advantage. **Dwarf Essex Rape** gives splendid forage for sheep and hogs.

GRASS SEEDS FOR THE LAWN AND FARM

It has been our constant endeavor for many years to obtain seeds of the highest quality to offer to our customers. Whenever possible we buy these seeds under a certificate of purity and germination, and as an additional precaution we submit samples to seed laboratories for testing.

The Grass Seeds listed below meet the general demand in this section of the country and are carried in stock by us; other varieties needed by our customers for special purposes can be secured very promptly. While the most of these are U. S. grown there are some varieties necessary for certain purposes that are imported. All our Grass Seed mixtures as listed below are made by ourselves from formulas based on careful study and recommendation of men long experienced in grass seeds. The seeds that go into them are the very highest grades, and our prices are reasonable for the high quality supplied.

SEE RECOMMENDATION FOR THE HOME VEGETABLE GARDEN ON PAGE 1

SPRAYING SUGGESTIONS

The question, when to spray and how to spray, is best answered by the bulletins issued by the various State experimental stations, and by the schedules sent out by manufacturers of Spraying Materials. One or two elementary suggestions, may, however, not be amiss:

Keep in mind that there are four distinct classes of insects or diseases to be fought:

- (1) Scale, the chief of which is San Jose Scale, produced by sucking insects.
- (2) Chewing insects, such as potato bugs, cabbage and tomato worms, caterpillars, codling-moth, etc.
- (3) Mildew, blight, rot, mold and other fungous diseases.
- (4) Sucking insects, such as aphids, plant lice, leaf hoppers, thrips, etc.

Having determined the disease, the remedies are: For No. 1, Scalecide, or Lime-Sulphur solution. For No. 2, Arsenate of Lead, Calcium Arsenate or Paris Green. For No. 3, Bordeaux in some form, Sulfocide, or Lime-Sulphur, summer strength. For No. 4, Nicotine Sulphate as in Black Leaf 40, Lotol or Tobacco Dust.

Sometimes two objects can be accomplished in one operation. For instance, the remedy against scale, the lime-sulphur solution, is now known to act against fungous diseases also and may be used, summer strength, with arsenate of lead for spraying against both No. 2 and 3. Another very successful combination is the use of arsenate of lead and bordeaux in one solution. Both are based on a fifty-gallon solution, and after you have made your bordeaux solution according to formula, it is an easy matter to add the proper proportion of arsenate of lead and thus in one grand operation accomplish both objects, No. 2 and No. 3. Within the past year or two several manufacturers have mechanically combined Arsenate of Lead or Paris Green with Bordeaux and the resulting compounds, which are satisfactory in every way, are much more convenient for the average grower than to undertake to make the mixture one's self. These compounds are listed below under Pyrox and Pestroy. To these may be added, when aphids or other sucking insects are present, Black Leaf 40 at the rate of $\frac{1}{2}$ pound to 50 gals., and thus accomplish No. 4 object as well as Nos. 2 and 3.

Calcium Caseinate used in spraying solutions as a spreader and sticker, greatly increases the efficacy of the spray. Listed at bottom of this page.

No. 1. The chief disease under this head, as noted above, is San Jose Scale. The spraying for this must be done when the trees are dormant, that is, after the leaves fall in the autumn and before the growth starts in the spring. Use one of the following:

Lime Sulphur. The old standard remedy for scale. We can furnish either the liquid or powder preparation.

Powder. (Dormant spraying, use 1 lb. to 4 gallons of water).

Prices: Pound, \$.30; 5 pounds, \$1.25; 10 pounds, \$2.00; 25 lbs., \$4.00; 50 lbs., \$7.00; 100 lbs., \$12.50.

Liquid. (Dormant spray, use 1 gallon to 9 gallons of water).

Prices: Quart, \$.40; 1 gal., \$.85; 5 gal., \$3.25; 10 gal., \$5.75; 25-gal. drum, \$8.00; 55-gal. drum, \$12.50. (Allowance of \$1.50 for the empty drums returned in good order before July 1st).

"Scalecide" (Miscible oil). While some orchardists still prefer a lime-sulphur spray, the use of miscible oil is increasing.

Experiments have shown it to be as effective against scale, is more economical and also pleasanter to work with. It may be combined with other materials for controlling other pests with one spraying operation. (Use 1 gallon to 15 gallons of water.)

Prices: Quart, \$.60; 1 gal., \$1.50; 5 gals., \$6.00; 10 gals., \$10.00; 30 gals., (barrel), \$26.00; 50 gals., (barrel), \$38.00.

No. 2. Under this head are a host of chewing insects, some of them mentioned above. Every kind of plant or fruit has its particular enemy which we must fight to the death. Spraying against these is done after the growth starts in the spring and at frequent intervals. The remedies are all poisons, mostly arsenic compounds, as follows:

Arsenate of Lead (powder). This is the most generally used of all the arsenic sprays both for fruit trees and vegetables.

For the former it is usually applied diluted in water at the rate of 1 to $1\frac{1}{2}$ lbs. in 50 gallons, which will also answer for vegetables. If dusting is preferred on vegetables mix 1 lb. in 10 to 25 lbs. Hydrated Lime, according to the method of application.

Prices: $\frac{1}{2}$ lb., \$.25; 1 lb., \$.40; 4-lb. bag, \$1.10; case of 24 lbs., \$6.00; case of 48 lbs., \$11.50.

Calcium Arsenate (powder). More recently introduced than Arsenate of Lead, it is superseding the latter for spraying vegetables and especially in the treatment of potatoes for the beetle. It is also taking the place of Paris Green for that purpose, because it sticks to the plant much longer and is therefore more effective; also it is much less likely than Paris Green to burn and blight the vines. Use Calcium Arsenate on your potatoes and other vegetables. Mix 1 pound in 25 lbs. hydrated lime, or 2 pounds in 50 gallons of water.

Prices: $\frac{1}{2}$ lb., \$.15; 1 lb., \$.25; 5 lbs., \$1.00; 10 lbs., \$1.75; 25 lbs., \$3.75; 50 lbs., \$7.00.

Paris Green (powder). The first and best known remedy for the potato bug, but Calcium Arsenate is now taking its place for that purpose. For dusting, mix 1 pound Paris Green in 50 lbs. hydrated lime or land plaster.

Prices: $\frac{1}{4}$ lb., \$.15; 1 lb., \$.45; 5 lbs., \$1.80; 14-lb. kit, \$4.85.

Insectrogon. Effective against caterpillars, leaf chewing insects and slugs on rose bushes. Price: $\frac{1}{2}$ pint, \$1.00.

Melrosene (liquid). An effective remedy against rose-bugs. Does not injure bloom. Mix 1 part with 20 parts of water.

Prices: Trial can (makes 1 gallon), \$.50; pint, \$1.00; quart, \$1.75; $\frac{1}{2}$ gallon, \$3.25; gallon, \$6.00.

Calcium Caseinate. Used in sprays as a spreader and sticker. Directions on package.

Prices: $1\frac{1}{2}$ lbs., \$.40; 5 lbs., \$1.00; 25 lbs., \$4.25.

No. 3. Fungous diseases are to be treated under this head and the following are the most satisfactory remedies:

Bordeaux (powder). For use on most fruits and nearly all vegetables. Mix 2½ ounces in 1 gallon of water or 1 pound in 7 gallons. Prices: Pound, \$.30; 4 lbs., \$1.00; 25 lbs., \$4.75.

Sulfocide (liquid). A splendid summer spray; we recommend it confidently. It keeps your trees and plants healthy and your fruit and vegetables sound. Do not use with Arsenate of Lead. Mix 1 part with 200 parts of water. Prices: Pint, \$.50; quart, \$.75; 1 gallon, \$2.25; 5 gallons, \$8.75; 10 gallons, \$15.00.

Lime-Sulphur (powder). Use summer strength; that is, 3 to 4 pounds in 50 gallons of water. For prices see opposite page under No. 1.

No. 2 and 3 combined. To destroy both chewing insects and fungous diseases at one operation you may combine Arsenate of Lead with Bordeaux or with Lime-Sulphur, summer strength, using the proportions given above under those different headings. But an easier way is to use one of the following compounds:

Pyrox (paste, Arsenate of Lead and Bordeaux combined). This is the most popular spray of this character on the market. It is easy to use and wonderfully effective as an insecticide and a fungicide. For most fruit trees mix 1 pound in 5 gallons of water and for potatoes 1 to 4.

Prices: Pound, \$.45; 5 lbs., \$1.75; 10 lbs., \$3.00; 25 lbs., \$6.50; 50 lbs., \$11.00; 100 lbs., \$18.00.

Pestroy (Arsenate of Lead and Bordeaux in powder form). Very effective, highly recommended. Use one pound in 7 gals. water. Prices: ½ lb., \$.25; 1 lb., \$.35; 5 lbs., \$1.30.

Fungtrogen (liquid). For controlling mildew and blackspot on rose bushes. 4 oz. can \$.50.

No. 4. This refers to the damage done to plants by Aphis and other plant lice which suck the juices out of the leaves and consequently do serious injury to the plant life if not checked by one of the following remedies, which all contain Nicotine Sulphate:

Black Leaf 40 (liquid). This is the best known remedy for these destructive insects. It may be applied separately or in connection with any of the various summer sprays mentioned above. Use 1 ounce in 6 gallons of water or liquid spray solution; ½ pound to 50 gallons.

Prices: Ounce, \$.35; ½ lb., \$1.25; 2 lbs., \$3.25; 10 lbs., \$12.00.

Lotol (paste). An effective remedy for insects of the Aphis type. One teaspoonful will make a gallon of spray.

Price: 1 ounce tube, (makes 6 gallons), \$.25.

Aphistrogen. Effective spray against aphis and plant lice on rose bushes. 4 oz. can \$.75.

Bug Death Aphis (Powder. Special against Aphis). 1 lb., \$.20; 5 lbs., \$.75.

Tobacco Dust (for dusting plants). Pound, \$.10; 5 lbs., \$.40; 25 lbs., \$1.25; 100 lbs., \$4.00.

Slug Shot (powder, non-poisonous). This is one of the oldest and most reliable insect powders on the market. It is both an insecticide and a fungicide and is especially effective against slugs, cabbage and currant worms and other soft-shelled insects. It should be used freely just as it comes from the package without dilution, as it not only does not burn the plants, but it acts as a fertilizer also.

Prices: 1-lb. carton with perforated top, \$.20; 5 lbs., \$.55; 25 lbs., \$2.50; 100 lbs., \$9.50.

P-T-B. Effective in controlling peach tree borer. 1-lb. can, \$.50; 5-lb. can, \$2.25.

Hellebore (Powder, effective against insects). ¼ pound, \$.20; ½ pound, \$.30; 1 pound, \$.50.

Sulphate of Copper (Crystals). Pound, \$.15; 5 lbs., \$.65; 10 lbs., \$1.20; 25 lbs., \$2.50; 50 lbs., \$4.50.

Powdered Sulphur (For dusting). Pound, \$.10; 5 lbs., \$.40; 10 lbs., \$.70; 25 lbs., \$1.40; 50 lbs., \$2.25; 100 lbs., \$4.00.

Tobacco Stems. Pound, \$.08; 5-lb. bag, \$.20; 20-lb. bag, \$.60; Bale (about 125 lbs.), \$1.60 per 100 lbs.

Weed Killer (Mix 1 gallon with 40 gallons water). Quart, \$.60; gallon, \$1.75; 5 gallons, \$7.00.

Sulpho-Tobacco Soap. 3-ounce cake, \$.10; 8-ounce cake, \$.20; 1 pound, \$.35.

Fish Oil Soap. ½ Pound, \$.15; pound, \$.25.

Grafting Wax. ¼ pound, \$.20; ½ pound, \$.35; pound, \$.60.

Pruning Compound. Apply with brush to cuts or other surface wounds, Qt., \$.65.

Tree Tangle Foot (To band trees against caterpillars). Pound, \$.60; 5 lbs., \$2.75.

Tanglefoot Fly Spray (For household use). Pint, \$.75; quart, \$1.25.

Conkey's Fly Knocker (For spraying horses and cows). Quart, \$.60; 2 quarts, \$.90; gallon, \$1.50.

Creonoid Fly Spray (For horses and cows). Gallon, \$1.35; 5 gallons, \$4.50.

POULTRY SUPPLY DEPARTMENT

The value of the output of the poultry industry in this country continues to increase from year to year, and manufacturers of special feeds, remedies, medicines and accessories for the poultrymen endeavor to keep apace. New articles having more or less merit are continually being put on the market, so that it is impossible for the dealer to carry all of them. The articles of merchandise we offer on the following pages we believe to be among the very best on the market; the most of them have been on the market for a number of years and the continued demand for them justifies our continuing to list them herein. Among the myriad of new articles that are offered to us continually we occasionally see something that seems to have special merit, and we add it to our list. We cordially invite an inspection of these goods at our salesroom.

GLASS SUBSTITUTES

"CEL-O-GLASS" and "GLASS CLOTH"

Light and strong. Keeps out wind and storms; admits light and warmth, and transmits the valuable ultra violet rays of the sun. Can be cut with shears to any desired shape. Especially useful for poultry houses, hotbed sash, green houses and other buildings. Very serviceable, and if punctured can be repaired. Ask for samples and descriptive circulars.

A coarse mesh galvanized wire cloth covered with a translucent, flexible substance that will not peel or break. Light and strong.

Rolls are 3 feet wide

100 ft. roll \$42.00
50 ft. roll 21.50
25 ft. roll 11.00

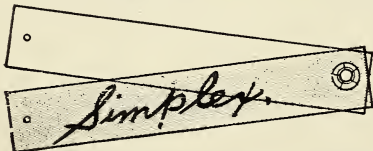

Shorter lengths at 50c lineal ft.

If wanted by parcel post add postage at the rate of 1 lb. per sq yd.

GLASS CLOTH. A specially processed strong fabric treated to render it transparent. Rolls are 35 inches wide.

300 ft. roll \$27.00
150 ft. roll 14.00
45 ft. roll 4.50

Shorter lengths at 15c lineal ft.

WEATHERPROOF PLANT LABELS

Write desired marking on card with ordinary lead pencil and cover with transparent sheet; copper wires furnished for attaching label.

25 lb. bag	2.75
50 lb. bag	5.00

A Beautiful Lawn

is obtained only by much thought and a great deal of careful attention over a period of years. In making a new lawn the first step is the consideration of the needs of the soil; it should be fertilized, and the addition of humus or leaf-mould may be necessary; pulverized lime should be applied to counteract any acid or sour condition. The second step is the selection of the seed. Our Lawn Seed mixtures are not haphazard combinations, but the result of careful selection of different varieties in an effort to obtain continuous growth throughout the season. Some of these varieties are domestic grown and others are imported. The following brands have been on the market for a number of years and are the most popular:

BRANDYWINE PARK LAWN GRASS (with White Clover).

EVERGREEN LAWN GRASS (without White Clover).

Quantity to Use—4 to 6 Qts. per 1000 Sq. Ft.; 5 to 6 Bu. per Acre.

When to Sow—In March or April, and in September or October.

In addition to the above we make grass seed mixtures for special purposes such as Shady Places, Permanent Pastures, etc. A complete list of Grass Seeds with prices, will be found on page 5, and a full line of Fertilizers for Lawn, Garden and Field is given on page 8.

Seeding Schedule of Field Seed

	Weight Per Bus.	Quantity Per Acre	Time of Seeding
